

CFG

The TROX CFG floor grille is the similar like AFG where it has been specifically developed for mounting in Raised Access Floors in such areas as Computer Rooms, where load and damage resistance are of the utmost importance.

Having a rating of extra heavy duty to the latest specifications, the CFG can replace 600mm square floor tiles to handle supply air. Grille border can be specified to suit the type of floor system used. A range of surface finishes is available.

Unlike AFG, CFG is having two options of fan to greatly assist supply air to room. CFG-AC is giving a constant airflow while CFG-EC airflow is proportional by 0-10Vdc signal.
